EMISSION REPORT

2024

In line with our principles,
we are pleased to share with
you our Annual Emission
Report for 2024.

For reporting greenhouse emissions
(GHG) we used the GHG Protocol Corporate
Accounting and Reporting Standards.
Emissions are divided to three groups
categorized by direct and indirect emissions.

SCOPE 1

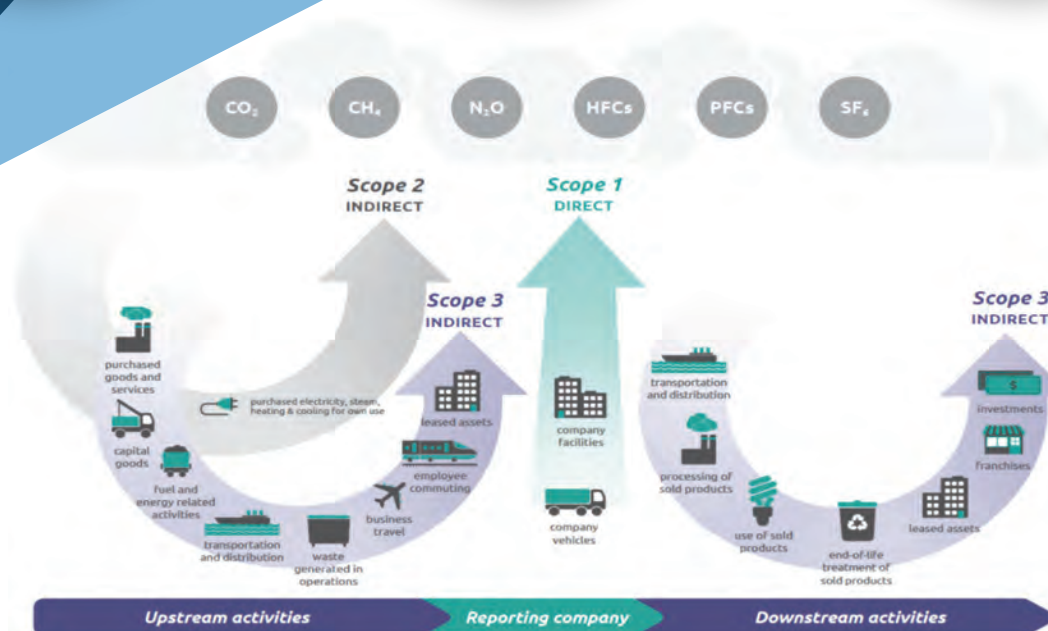

Direct emissions from
owned or controlled
sources

SCOPE 2

Indirect emissions from
purchased or acquired
electricity

SCOPE 3

All other indirect
emissions that occur
in the value chain

EMISSION REPORT

We estimated a total of 8474 Metric Tons (Mt) of GHG. 57% of these emissions are Scope 2 and are due to purchased electricity (99.1% due to our mills in the US and 0.9% due to our mills in Canada).

As for the Scope 1, the estimation is at 3181 Metric Tons (Mt). This includes the emissions from the combustion of natural gas, oil/mazut and fuel for internal transportation. The emissions from propane were not taken into consideration as they were estimated at less than 0.05%.

Duvaltex is committed to reduce Scope 1 and 2 emissions and to set a science-based Target (SBTs) in 2026.

Our emissions are reported based on our Fiscal Year. For the year 2024, we estimated Scope 1 and 2 emissions for 5 mills, 3 in the US and 2 in Canada. We are working on the estimation of our Scope 3 emissions for next year.
