

Cleaning & Disinfection

Care that protects performance.

duvaltex

A close-up photograph showing a person's hands cleaning a light-colored, textured fabric surface. The person's left hand, adorned with a ring and having manicured nails, holds a white microfiber cloth against the fabric. Their right hand holds a clear glass spray bottle with a white trigger, dispensing a liquid onto the fabric. In the background, a white fabric sample is pinned to a surface with four metal pins.

Every textile has a routine

Most days ask little of a textile. Dust settles. A hand brushes past. Regular care is what keeps it looking new.

Some days ask more: a spill, a stain, a moment that calls for disinfection. This guide follows a textile through both kinds of days.

DUVALTEX CLEANING & DISINFECTION

An ordinary day of care

Duvaltex textiles carrying the Standard W-S care code can be cleaned with a wide variety of cleaners.

Soap and water

Water-based cleaning agents

Solvent-based cleaning solutions

Other cleaning systems for upholstery

A regular vacuum keeps dust and dirt from ever becoming a problem.
Frequency depends on end-use conditions.

SOAP & WATER

WATER BASED

ROUTINE VACUUM

DUVALTEX CLEANING & DISINFECTION

When something spills

Act fast

Blot fresh spills immediately with a clean cloth.

Clean gently

Apply water or cleaner and wipe with a cloth or brush until the surface is clean.

Rinse well

Residual cleaning agents left on the surface can accelerate soiling.

Call a professional

For large or set-in stains, or when the entire surface is soiled.

Routine care limits soil buildup, so accidents like this stay the exception, not the rule.

A moment for disinfection

Identify the style

Confirm the exact fabric name to look up its Cleaning Code.

Test first

Try any product on a small, hidden area before treating the full surface.

Follow the code

Styles marked W-S accept hydrogen peroxide, alcohol or quat-based disinfectants. Styles also marked Bleach Cleanable accept a 10% bleach solution.

Rinse and dry

Finish with a damp cloth so no product residue is left behind.

IDENTIFY

TEST FIRST

FOLLOW THE CODE

RINSE & DRY
