

Seating Textiles

Performance that lasts.

duvaltex

Built to perform

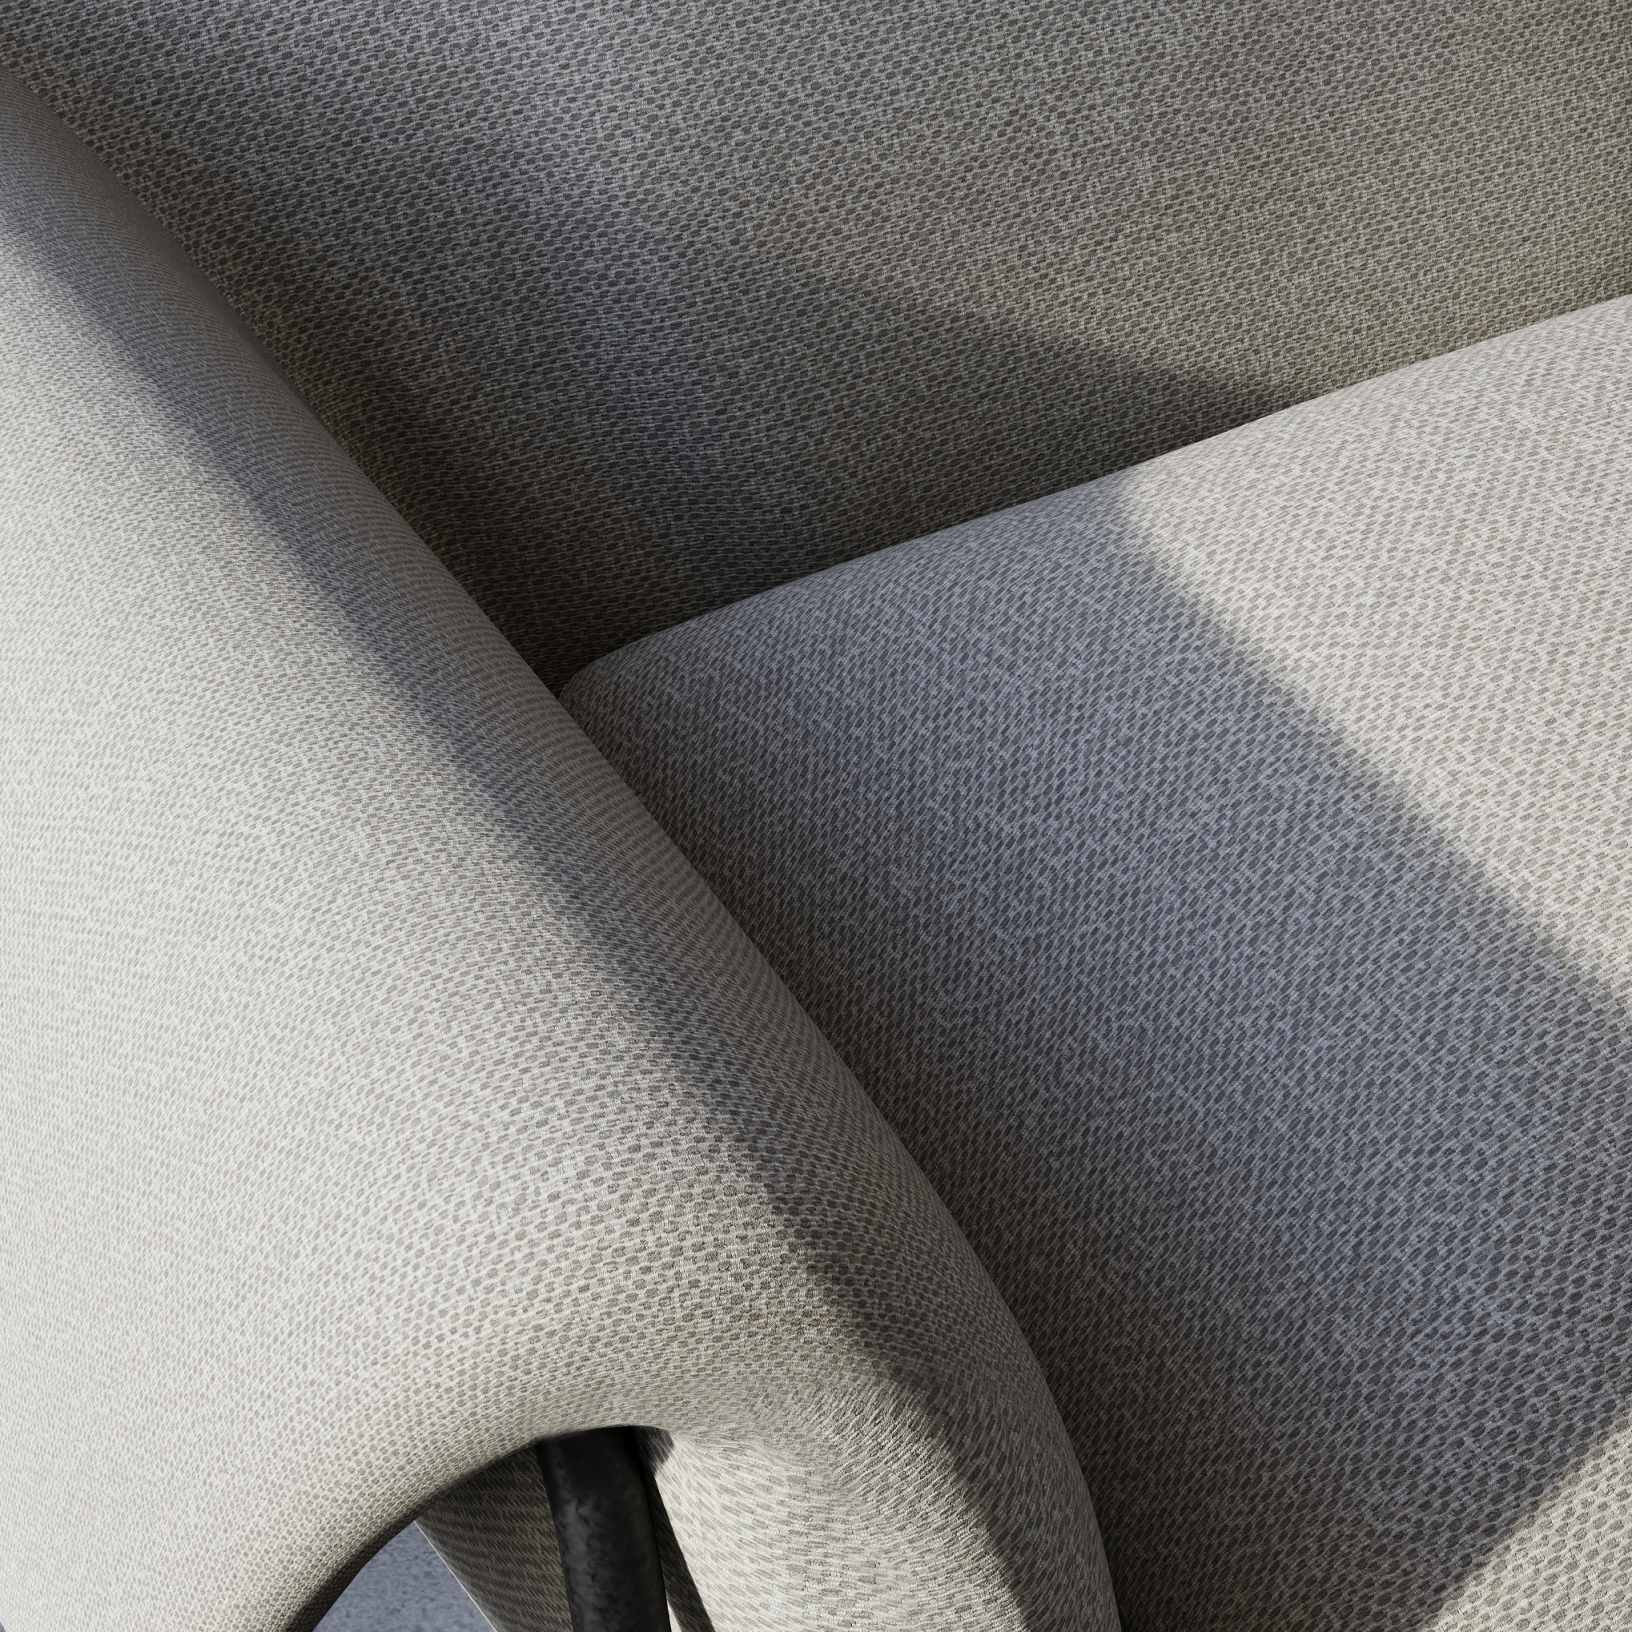

Seating fabrics face a different kind of test every day. Duvaltex fabrics are engineered to meet it.

In seating applications, performance isn't just about how a fabric looks on day one. It's about how it holds up after thousands of sits, shifts, and cycles of daily use. Selecting a textile is a durability decision, not just an aesthetic one.

DUVALTEX SEATING TEXTILES

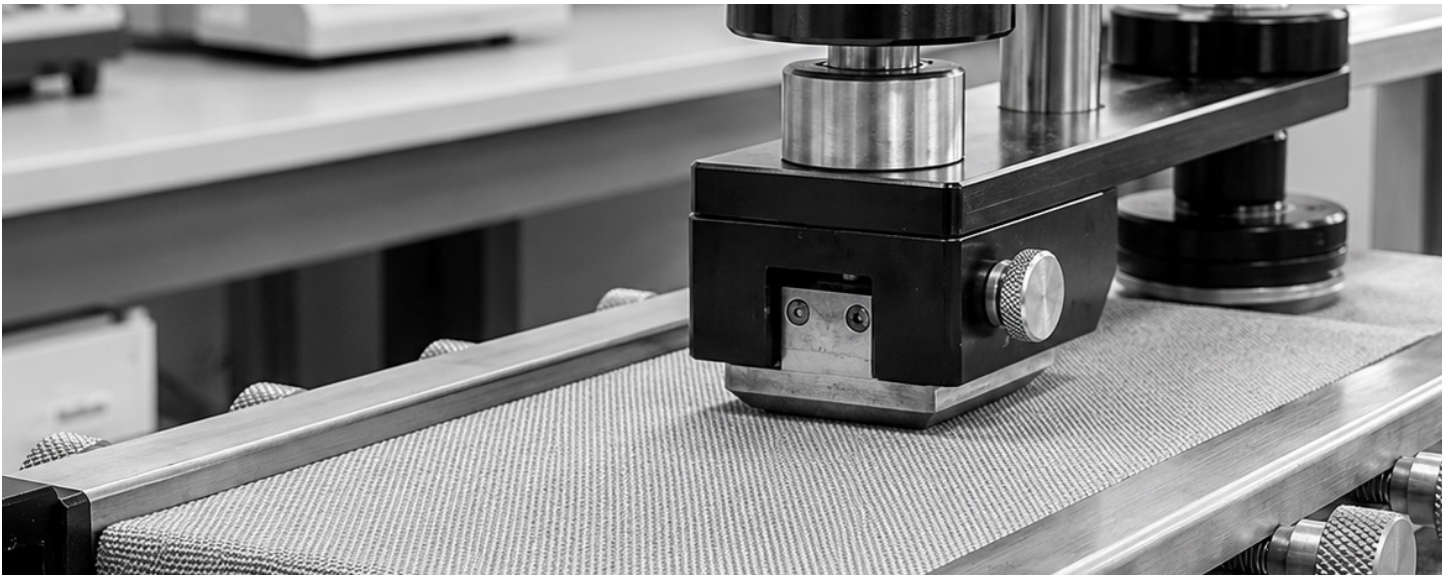

What is abrasion? Why it matters. How we test it.

Abrasion refers to the wearing away of a fabric's surface caused by repeated rubbing or friction, the kind of everyday contact that occurs each time someone sits down, shifts, or gets up.

Specifying a fabric built for abrasion resistance protects the integrity of the entire piece, long after installation.

Duvaltex fabrics are tested according to recognized industry standards, with the Wyzenbeek method (ASTM D4157) as our primary reference for abrasion resistance.

DUVALTEX SEATING TEXTILES

Beyond abrasion

Performance doesn't stop at durability. The right finish can make installation easier, extend product life, or simplify maintenance, depending on the application.

C0 stain repellent

An invisible barrier against water based stains, free of harmful chemicals.

Crypton

Repels dirt and liquids while blocking the odors and bacteria that come with them.

Acrylic backcoating

A durable reinforcement that eases upholstering and prevents fraying.

Biodegradable backing

A complete, biodegradable* solution paired with our Biodegradable Clean Impact Textiles.

Dipcoat

Adds resistance to water, oil, and UV, ideal for wallcovering applications.

Full specifications for each finish, including width, minimum order, and lead time, are available in our library.
